Protocol Architecture, Contract Registry & On-Chain Control Dossier

[SYSTEM SPECIFICATION & VERIFICATION REFERENCE]

METADATA RECORD

- Protocol Designation: XRP262
- Settlement Network: Stellar Mainnet
- Consensus Passphrase: Public Global Stellar Network ; September 2015
- Soroban RPC Node: <https://mainnet.sorobanrpc.com>
- Horizon REST Gateway: <https://horizon.stellar.org>
- Classification: Infrastructure Dossier & Verification Registry
- Publication Date: September 20, 2026

01 / SOURCE-OF-TRUTH & VERIFICATION FRAMEWORK

The XRP262 protocol is an engineered Stellar-native asset architecture deployed on Stellar Mainnet. It bridges classic Stellar distributed ledger primitives with programmable Soroban smart contract logic via the Stellar Asset Contract (SAC) standard and the LEXORA Controller.

Classification Matrix

To maintain strict institutional credibility and technical integrity, all statements in this dossier adhere to four rigorous categories:

Category	Scope & Standard of Evidence
1. On-Chain Ledger	Immutable ledger state, account balances, storage
2. Contract Bytecode	Compiled Soroban WASM bytecodes & interface schemas
3. Architecture	Documented structural boundaries & state transitions
4. Trust Constraints	Explicit administrative bounds & security guarantees

OPERATIONAL NOTICE: XRP262 is not presented as an audited, trustless, immutable, or decentralized protocol. It is an explicitly administered, programmable asset architecture operating under verifiable on-chain constraints.

02 / VERIFIED MAINNET IDENTIFIERS

All identifiers below are active, verified cryptographic addresses on Stellar Mainnet:

03 / ASSET PARAMETERS & SUPPLY INVARIANTS

Core Ledger Parameters

- Asset Code: XRP262
- Decimal Precision: 7 (1 XRP262 = 10,000,000 stroops / base units)
- Maximum Configured Supply: 900,000,000,000.0000000 XRP262 (9,000,000,000,000,000,000 base units)
- Genesis Minted: 900,000,000,000.0000000 XRP262
- Cumulative Burned: 426,026,808.0000000 XRP262 (4,260,268,080,000,000 base units)
- Current Circulating: 899,573,973,192.0000000 XRP262

Asset Ledger Parameters

- Asset Code: XRP262
- Issuer Public Key:
GCGVZEE7RD2BFF2EIQUT37DYJUR7WDCQ2KWA5LUWYATRFLKEYHMJ3XRP
- Display Decimals: 7 (1 XRP262 = 10,000,000 base units / stroops)

- Configured Maximum Supply: 900,000,000,000.0000000 XRP262 (9000000000000000000 base units)
- Genesis Minted Supply: 900,000,000,000.0000000 XRP262
- Genesis Burned Supply: 426,026,808.0000000 XRP262 (4260268080000000 base units)
- Current Circulating Supply: 899,573,973,192.0000000 XRP262

Conservation Invariant Formula

Circulating Supply = Minted Supply - Burned Supply

900,000,000,000.0000000 XRP262	(Minted)
- 426,026,808.0000000 XRP262	(Burned)
= 899,573,973,192.0000000 XRP262	(Circulating)

06 / SYSTEM ARCHITECTURE & TOPOLOGY

- Programmatic Mint/Burn Controls

Layer Responsibilities:

1. Classic Asset Layer: Trustlines, native decentralized orderbook (DEX) liquidity, and atomic multi-currency routing.
2. Stellar Asset Contract (SAC): Bi-directional bridge enabling Soroban smart contract invocations and SEP-41 token interfaces.
3. LEXORA Controller: Programmatic policy governance, max supply enforcement, and administrative permission gates.

07 / CONTROLLER STATE MACHINE & POLICY LOGIC

The LEXORA Controller implements deterministic state transitions:

- TokenStatus Enum: Supports Active and Disabled states.
- is_token_allowed(): Returns true strictly when TokenStatus == Active.
- Supply Guardrails: Enforces that minted supply cannot exceed max_supply.
- Administrative Decoupling: While the registry controls protocol interactions, classic Stellar payment rails operate independently unless restricted by SAC administration.

08 / CONTROL HIERARCHY & CUSTODY BOUNDARIES

Independent Verification Endpoints:

- StellarExpert Asset Page: XRP262 on StellarExpert
- Horizon Endpoint: <https://horizon.stellar.org>
- Soroban RPC: <https://mainnet.sorobanrpc.com>

Verification Workflow:

1. Query LEXORA Controller contract storage to inspect policy base units.
2. Query SAC admin field to verify controller contract address.
3. Validate circulating balance on distribution account.
4. Audit burn transaction hash:
